

SEATING

A SEAT FOR EVERY OCCASION

Now more than ever before, seats play an essential role in the furnishing of your office space.

Beyond fulfilling merely functional roles, they also bring personality into the furnishing equation: whether full of colour, ergonomic, functional, ingenious, capacious or elegant, seats are omnipresent throughout a company's premises and have become a linchpin for well-being in the workplace.

They are available in a wide variety of colours, shapes and sizes. Each seat designed to respond to a specific need: predominantly used for work, but also for exchanges, training, brainstorming sessions or even relaxation.

ADOPTING A GOOD POSTURE AT WORK

Having an ergonomic seat to work from comfortably is critical, particularly given the many hours that are spent sitting in it. If unsuited to the task at hand, this will quickly become noticeable with the possibility of immediate effects on a user's health.

Featuring headrests, armrests, integrated lumbar support or even oversize backrests, our chairs offer maximum levels of comfort.

Try to avoid staying seated for periods in excess of 2 hours... taking a break from sitting can be a good opportunity to stretch your legs and visit other areas of the company or interact with other employees.

To help you make the right choice of seat, consult our selection guide on p. 197.

CHOOSE THE RIGHT SEAT FOR YOU

Given the sheer diversity of individual needs, aspirations and morphologies, it is difficult to identify a particular chair that is suited to all users. However, the right chair for each individual employee can be determined by evaluating the different mechanisms, ergonomics and uses of these. Making the right choice is not as straightforward as it seems: which chair to choose, how well can it be adjusted? Follow our guide to discover the specific characteristics of our chairs and advice on their usage.

SPOTLIGHT ON SEAT MECHANISMS

PERMANENT CONTACT

This is a system of articulations in the backrest, independent of the seat, providing continuous support to the user's back.

The chair's backrest will follow the movements of the user's back, thereby staying in «**permanent contact**» with it, independently of the seat which remains static. For better stability, the backrest can be locked in position.

SYNCHRO

This is a system that enables the synchronised tilting of the backrest and the seat at variable angles, meaning greater comfort for the user and ensuring support is provided to the whole body. There are 4 types of synchro mechanism featured on EOL chairs :

Self-regulating, for automatic adjustment to backrest tension

Comfort, for manual adjustments to backrest tension, thanks to a handwheel under the front of the seat.

Ergonomic, for manual adjustments to backrest tension thanks to a lever on the side of the seat, and adjustments to seat depth.

Ergo+ for the same adjustment options as with the ergonomic version, but with a greater range of adjustment and a negative seat tilt system.

TILTING

A system ensuring a synchronised tilting backwards of the seat and the backrest, with a handwheel enabling backrest tension adjustments. There are 2 types of tilting mechanism :

Central axis tilt mechanism, with a constant angle maintained in the tilting action in order to accompany and dampen movements (the pivot point is centred under the seat).

Forward axis tilt mechanism, the tilting action is still made to a constant angle, but with a pivot point located further towards the front of the seat. In this way, the user's feet remain firmly in contact with the floor, irrespective of the degree of inclination or tilting of the chair.
