Meeting and visitor chairs	330
Training and conference chairs	334

Ergonomics and buying guide

■ Mechanisms:

Synchro

- > The synchronisation of the seat and backrest provide continued support to the user in accordance with his bodyweight.
- > The mechanism is adjustable in tension and the backrest has a multi-position back lock (varies according to seat model).
- > All our seats are fitted with a backrest reverse lock safety mechanism.
- > Ergonomics: ★★★

Forward axis tilt mechanism

- > Seat tilts around a horizontal axis. The mechanism is located towards the front of the seat, enabling the user to keep his or her feet in constant contact with the floor.
- > The mechanism is adjustable in tension and can be locked in determined user positions.
- > Ergonomics: ★★

Central axis tilt mechanism

- > Seat tilts around a horizontal axis located centrally beneath the seat.
- > Tension can be adjusted and locked in the forward position.
- > Ergonomics: ★

■ Standards and certifications:

EN1335: Office task chair standards

- > Part 1 : Dimensions
- > Part 2 : Safety requirements
- > Part 3 : Safety tests

EN1728/EN16139/EN1022/EN13761: Office chair and collective seating standards

- > Safety, strength, durability and dimensions.

EN1021 : Standard on fire resistance ratings for materials and coatings

- > Part 1 : Cigarette
- > Part 2 : Matches

■ Guarantees:

- > The seat mechanism and structure are guaranteed for use by one person under normal conditions. Guarantees do not cover: excessive or inappropriate use, environmental conditions (sunlight, humidity, wear and tear of fabrics, etc..) and the natural wear of materials.

- > Standard 2 year guarantee on parts subject to wear (castors, gaslifts, arms, fabrics etc..), extended guarantee available on certain fabric upholstery (see prices p 346-347).

■ Leather and upholstery:

The selection of colours available is a reflection of the current trends. The choice of colours and upholstery varies depending on the seat ranges. A variety of fabrics and leathers are available from stock. There are three types of leather:

- > «Full-grain» leather refers to a type of leather that has not been sanded. The leather's natural grain is preserved along with all its natural characteristics.
- > «Corrected-grain» refers to a type of leather from which the tanner has corrected or sanded off imperfections. An artificial grain is then applied to its surface.
- > Crust leather refers to the underside of the hide, and is obtained by separating the layer of top-grain from the rest of the hide.

Ergonomics and buying guide

■ Sitting posture :

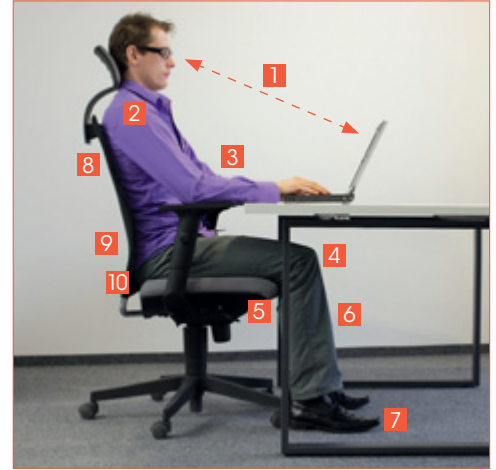

The choice of a good seat and a healthy sitting posture are crucial in preventing backache and avoiding MSDs (Musculoskeletal Disorders). It is therefore important to have a seat that can adapt to a user's size and body shape and can be adjusted for maximum comfort.

How to sit correctly

- > Adopt a healthy sitting position and use a seat that ensures appropriate support for the body.
- > Lean backwards regularly in order to minimise pressure on your intervertebral discs.
- > Choose a chair with an adjustable seat. By synchronising seat and backrest movement, the angle of the sitting position can be increased from 90° to 110°, thereby reducing pressure on the vertebral column.
- > Use a seat that features adjustment levers that are intuitive to use and accessible from a sitting position. Adjustment controls must be logical and easy to manage.

Recommendations

- 1 Eye/screen distance 50 to 70 cm
- 2 Relaxed shoulders
- 3 Forearms in horizontal position with elbows bent at an angle slightly in excess of 90°
- 4 Distance between knees and desk : 8 to 10 cm
- 5 Avoid pressure to the area behind the knees
- 6 Legs at a 90° angle°
- 7 Feet resting flat on the ground (use a footrest with a 0 to 15° pitch if necessary)
- 8 Lock the back against the backrest
- 9 Adjust the height of the backrest to provide optimal support for the pelvic and lumbar region.
- 10 Occupy the entire surface of the seat

■ Mechanisms:

Self-regulating

- > The mechanism automatically adjusts tension according to the weight of the user.
- > Optimal synchronisation of the seat/backrest positions for different users.
- > Backrest with end-of-run damping mechanism.
- > Ergonomics: ★★★★★

Synchro

- > The synchronisation of the seat and backrest provide continued support to a user in accordance with his weight.
- > The mechanism is adjustable in tension and the backrest can be locked in a range of predetermined positions (varies according to seat model).
- > All our seats are fitted with a backrest reverse lock safety mechanism.
- > Ergonomics: ★★★

Forward axis tilt mechanism

- > Seat tilts backwards around a horizontal axis located towards the front of the seat, enabling the user to keep his or her feet in constant contact with the floor.
- > The mechanism is adjustable in tension and can be locked in multiple positions.
- > Ergonomics: ★★

Central axis tilt mechanism

- > Seat tilts backwards around a horizontal axis located centrally beneath the seat.
- > The mechanism is adjustable in tension and can be locked in a forward position.
- > Ergonomics: ★

Permanent contact mechanism

- > The backrest stays in permanent contact with the user's back without affecting the seat position.
- > The mechanism may or may not be adjustable in tension. ★

■ Textile fabrics, leather and upholstery:

The selection of available colours follows current trends; the choice of colours and fabrics varies depending on the seat ranges and can be chosen to co-ordinate with desktop screens and screens. Fabrics available from stock include polypropylene: category A, category B M1 fire-resistant polyester, fabrics specific to certain models (antibacterial, 24h, etc.), leather, simulated leather...

- > 62 fabric colours available on request divided into 3 categories: A, B or C depending on the material: polypropylene, polyester, wool, PVC coating... For characteristics, reference codes and available colours see p. 346-347.
- > Price guides and feasibility for each product category can be found under the relevant office chairs product range. In certain ranges it is possible to opt for specific fabrics or coloured leathers. Details can be found under the relevant product section.

 **39** fabrics available on request (allow 4 to 6 weeks for delivery) Shades and codes : see pages 346-347.

 **Cat. B fabrics:** + £ xx premium on the category A fabrics pricing
Tissus C : + £ xx premium on the category A fabrics pricing

■ Adjustments:

Backrest height adjustment

- > Allows a user to adjust the position of the backrest to provide optimal lumbar support.

Seat depth adjustment

- > Allows a user to adjust the position of the seat, in accordance with his size, along a front to back axis and optimise the contact area between the seat and his thighs.

Lumbar support adjustment

- > Allows a user to adjust the height and/or depth of lumbar region support on fixed backrests.

■ Options

Castors for hard floors

Our seats are fitted with soft-floor castors (unless stated otherwise). Soft rubber castors are available for use on hard floors (eg. parquet, tiled floors, linoleum, flagstones).

Armrests

By providing forearm support the armrests allow a user to adopt the best possible working position. Different fixed and adjustable designs are available (adjustable in height, width, depth, rotation). Details vary according to the model.

■ Standards and certifications:

EN1335 : Office chair standard.

- > Part 1 : Dimensions
- > Part 2 : Safety requirements
- > Part 3 : Safety tests

■ Guarantees:

- > The chair mechanism and structure are guaranteed for use by one person under normal conditions.. The product guarantee does not cover excessive or inappropriate use, the effects of environmental conditions (sunlight, humidity, wear and tear of fabrics, etc..) and the natural wear of materials.

- > Standard 2 year guarantee applies to working components (castors, pistons, arms, fabrics etc.), extended guarantees available on certain fabrics (see prices p 346 -347).
